

Declaration of the manufacturer regarding the directive 2014/34/EU

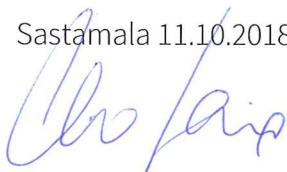

We have completed a risk analysis for Nira 6B hand pump with the following result:

Nira 6B pump (1104R) don't have an own potential source, and therefore directive 2014/34/EU is not applicable. The pump may be used in EX-range.

If Nira 6B pump is continuously being used in the Atex zone 1, both pump cylinders have to grounded in the pump body.

We like to point out that in the pump installation all conductive components have to be assembled in a way that no probable potential differences exist.
